In honour of both my real mom and my real dad I'm trying to keep programming in my little by little capacity. The link is to my current game development. After the credit screen you have the option to control the car with the keys HJL, spacebar, and the arrow keys. The plane can be controlled with ASDWFG. With time there possibly might be future developments. Either way, Thank you Jesus Christ for my real families!

Here is a tentative incorporation into my INTRO. I'm not sure if it will make it into the INTRO finals however here it is anyways. You should be able to run this module in XP and DOS although it is made just for DOS. Although it is made just for DOS it has been fine tuned a little bit so it would run in XP and possibly other Windows.

Honours to my real father, Nguyen Binh Thuy
Honours to my real mother, Huong Thi Vu

All through my life I didn't have a direction in life.
I often messed around, but now that I am older I see the reason why they are so strict.
They are set in their ways just like I've become more and more set in my ways.

Thank you Jesus Christ.

In the package contents are source codes and final outputs especially, INTRO.exe

God, Jesus Christ, is number one#!! Jesus Christ! In honour of my real dad: Nguyen Binh Thuy; When I still had the chance in his loving embrace, he taught me to be good. While I was in his place I failed to succeed in that. In honour of my real mom: Huong Thi Vu; Now that I only have my real mom left of my two real parents hopefully I am getting better at being good all the time. Here is the latest update to my Christmas mini-game INTRO.

In this update being released a little earlier than usual by about an hour and a half, there is a mini-Christmas tree. Little by little I'm updating this INTRO; I pray it last for the rest of my 100 happy years on earth!

Jesus! Well, I've been busy. Yesterday I did someone's yard for \$10. That was what I earned for the whole year plus a few Christmas presents early. Thank you God for small favors. When you have little in your life even a simple hello or a kind thank you is nice. So thank you to God for this website. May you enjoy at least 1 of my "INTRO" in your lifetime. Thank you again.

Honours to my real dad Nguyen Binh Thuy, and my real mom Huong Thi Vu; here is a subtly updated one. I've gotten 1 feedback and incorporated it into the game. Now you the number of screen width full of shells to start. The game is on difficult mode now. If you are able to reach 100 touch count then you win the game. Speed and position of the alien ship is different each time.

Thank you God for my work being good enough hopefully for this Christmas for all times!

Thank you Jesus Christ.

Here is the cheat edition. If you can find the hidden cheat key you have unlimited rapidfire by holding down the key. The same key that lets you cheat also allows you to turn it off.

Thank you Jesus Christ!

May your Thanksgiving and Christmas always be merry with true friends and true families.

By the way, you win the game when you hit the target one hundred times or more. There is a

hidden tally and a message when you win.

This is a little by little update.

Amen.

Honours to my real mother Huong Thi Vu

I've been working hard on this one in addition to trying to do other work. I'm not perfect because of pressure, but I give ALL glories to God for any part of me that is useful!!!!!!!!!!!!!!

Here in this one you have the incorporation of gamepads instead of keyboards. Actually you have the option to do either one. The keyboard is standard.

I've tested two gamepads so far for use with DOSBox 0.74. One is the Microsoft XBOX 360 gamepad with USB adapter. The other is a SONY PS ONE gamepad with USB adapter. These gamepads are originally for their own playstations according to my eBay research. However with the additional purchase of the right USB adapter you can hook it up to a PC.

Please note that this one only works for PC instead of Mac from last recall.

Love to my real sister Nguyen Khoa Thi

Love to my real sister Nguyen Khoa Thuyen

My family means a lot to me although we may not always agree!

So I hope if you ever download any of my INTROs/games you like it.

I try hard to produce something you want just like I would like it.

I know people go to work everyday. So I want to do the same.

Thank you Jesus Christ.

Thank you Jesus Christ! Here in this demo you can see the full instruction right in the gunner game instead of having to memorize every keyboard keys hehe I noticed there are some pretty interesting files on this website. Thank you. I might want it some day. I especially like the programming stuffs since I went to school officially for programming because of my two real parents.

[Attached Addendum]

The attached file is the most up to date up to December 2, 2015 at maybe 5:38am Central Time. Please note there is an extra undocumented key which is the number zero key. The game is a little more less predictable concerning possible locations after a touch.

Here is a new INTRO in honour of both my parents (mom Huong Thi Vu and dad Nguyen Binh Thuy).

By the way, I saw "Mathematica" just posted on this board. If that is the official Complex Math Formula Solver from many years ago that is pretty cool. I also saw FORTRAN compiler and that is cool too since my father and I once programmed in FORTRAN in school at least. COBOL is another language I learned in school. So thank you for some classics!

I will always remember my father who is a Buddhist and my mother who is a Catholic. Both religions teaches to do good to others. In other words "good karma".

Anyways, there are three attachments this time. One is the main program. The other two are the sources to create this main program. Of course you need the compiler. It requires Borland Turbo C 2.01 and Borland Turbo Assembler 4.1.

Here I've used David's Brackeen's 256 color VGA mode to reproduce photos on DOS. You can see that it is no longer 15 colors or pixels for the most part when my parents are shown.

Jesus Christ.

Well, I thought I was done with Gunner. However, I decided to see if I can make some music using Borland Turbo C 2.01 and Borland Turbo Assembler 4.1. It seems to be possible so far theoretically, and I'll have to wait to see how far I get in my development. After all, SoundBlaster is really just sending signals at the right moments to the sound card. So this shouldn't be much different except I have to develop my own algorithm. It is in its primitive stages right now so I'm sorry it sounds a little ogre-ish.

Love to my two real sisters Nguyen Khoa Thi and Nguyen Khoa Thuyen.

Thank you for your patient waiting and watching for my development to become successful.
