Outertech Cachem 5.0, works from 95 to XP.   Cacheman is a performance enhancement and
memory recovery utility. By optimizing the Disk Cache and additional system settings it can
prevent frequent swapping of the data to hard drive resulting in improved performance, system
reaction time and even stability. Besides this, Cacheman corrects generic problems on systems
with more than 512MB of RAM. Wizards help novice users to learn more about the tweaks and
their results.
