These are the Rev.4 drivers for the Reveal SC 400 video card with CD ROM drivers. Both for DOS/Win 3.1 and WIN 95. You might find it under this Reveal card is rebranded from Vibra. You might also find something along the lines of I38-MMSN830. I spent a few weeks digging to find them. It produces really good sound and is compatible with Sound blaster 16 & Sound Blaster Pro for Games.
