GOD! Well, blessings go first to my mom Huong Thi Vu after GOD. Honours next to my dad Nguyen Binh Thuy and Huong Thi Vu my mom. Love goes to my sister for working so hard and succeeding before their older brother me.

In this edition it is the final edition. It's been a good ride however there's not much left. Maybe the save and load features can be included to top it off. However I'll leave it for the programmers. I always like to do my own stuffs, etc. So have fun.

Jesus Christ for eternity at least for me from now on!

Honours to my real poppa Nguyen Binh Thuy, and my real momma Huong Thi Vu. hehe  
Loveable sis Nguyen Khoa Thi, and Nguyen Khoa Thuyen.

Thanks to God for sending your only son Jesus Christ who died at 33 years old for all people.  
Jesus Christ died at 3am.

Anyways, enough of history.

Content: This is the upgrade for people who want to save and load their own.

I know not all people want to be programmers. People have other better things to do. Some people have kids to watch. Then others have to go to grocery stores to work in the Deli department. No matter who you are you might not want to take up programming. Besides, I don't want to go to the Deli and cut my own meat when others are trained and professional at it. Besides those blades are dangerous for a nobody like me.

Well, for instructions to this simple character editor we start by saying most things are intuitive. For instance, the letter q usually quits a section or program. The tilda symbol that people usually call the squiggly character to the left of the number one on the keyboard exit to the editor, but first you have to have the letters scrolling on the rainbow before you can use that edit key. Once you are in the edit mode, just use the J, I, L, K, spacebar, <, and > keys to edit. Once again q quits back to the scrolling. However you are not able to see the new characters in affect and effect yet. You need to then go to the underscore key which many people say are the underline key. It is located on the minus sign usually. That key activates the "put my new character in" mode. Once

in that mode the < and > key cycles through the different letters you can change. When you are at the character you want to place the new design in just press +. It registers it. Then you can q to quit back to the scrolling rainbow of letters, numbers, and/or symbols. At this point it should show your new characters for the character you have registered.

Now the most important part is SAVING. While the characters are scrolling the plus sign saves it to disk. q will quit the program shortly.

Jesus Christ is always the saver to all people even if you think otherwise!

Anyways, I forgot to mention that my parents (my dad Nguyen Binh Thuy says always to have a backup, and my mother says always be nice). My two sisters who work hard says to tell them so they appreciate the hard work you've done. So I have to confess that I'm forgetful in my older years. So the missing thing I forgot to say is if it doesn't show your character set the next time don't worry, you just have to press the = (equal key) while the message is scrolling. Thank you.

Jesus Christ.

Here I have developed half of the new character set. Just press the equal key while it is scrolling on the rainbow to load part of the new character set in.

Honours to my real dad Nguyen Binh Thuy; I might not work for a company however I enjoy what I am doing. Also, it gives me great thanksgiving to God that I ended up a programmer that he always wanted me to go for.

Honours to my real mom Huong Thi Vu; She loves me too. Just recently she told me that I shouldn't be too hard on myself. If I couldn't make it then be patient and keep learning.

Bless my real mom Huong Thi Vu because she works hard to learn English as a Second Language (ESL) coming over to America and striving for a better life with my dad so we could have a better life.

Love to my real sister Nguyen Khoa Thi; She is the pride and joy because she graduated first in the family.

Love to my real sister Nguyen Khoa Thuyen; She is also another pride and joy because she graduated second.

Most important of all, BLESSINGS go to God who made all people!!!!!!!!!!!!

Thank you Jesus Christ.

God help!

In this edition we have a full feature editor. The instructions are mostly there. I tried to make it the best that I could.

Thank you Jesus Christ.

Jesus!

Here is the full feature custom letter editor. I've tried to make the program a lot easier to understand by including step by step tutorial in a way. I hope you all like it. I know it is not much however I'm trying to make it mainstream thanks to God!!! Honours to my real mom Huong Thi Vu, and my real dad Nguyen Binh Thuy, and love to my real sister Nguyen Khoa Thi and Nguyen Khoa Thuyen. The ride has been tough however I'm still striving for that last bit of the way that seems to never get here. Anyways, without further adue, here is the polished one hopefully.

Thank you Jesus Christ.

Well, I know it should have been the final one 12 editions ago hehe However I've made quite a few major changes since then that really hopefully improves the performances of the custom letter editors. In this edition the major change that you will see are the instructions are printed in large letters. The instructions are printed using proprietary Borland character sets. However all the other texts are printed using our own custom texts. You can further refine your own text now with an easier view since there is a magnification area of the letter being edited. Remember to make the letters active you must register your edited letter into that letter place. Please remember to save your work to disk for future use. Thank you.

Here in this edition, The Custom Letter Editor has been modified to incorporate and streamline the editing process so it becomes 1 function. Now when you edit with the Tilda (eg. ~) key you automatically are directed to choose which letter the custom character should replace.

Thank you Jesus Christ for my mom Huong Thi Vu; she is recovering well from her fever. Thank you God that she finally took a couple days off from working every day of the week! In fact, she needs a vacation because she feels like she is going crazy.
