Combinatorial Circuit Worksheet 1.0

<https://vetusware.com/download/Combinatorial%20Circuit%20Worksheet%201.0/?id=18098>

Digital Circuit Simulation Software

COMPDES 2.2

<https://vetusware.com/download/COMPDES%202.2/?id=18100>

Computer-Aided Circuit Design Program

Electronic ToolBox 2.0

<https://vetusware.com/download/Electronic%20ToolBox%202.0/?id=18097>

Analog Electronics Design Software (full version)

LG-CDROM DRIVERS

<https://vetusware.com/download/LG-CDROM%20DRIVERS/?id=18092>

Drivers for LG CDROM

LICE 1.0

<https://vetusware.com/download/LICE%201.0/?id=18099>

Logic Circuit Emulator

Superkey 1.1A 1.1A

<https://vetusware.com/download/Superkey%201.1A%201.1A/?id=18093>

SuperKey lets you create keyboard macros and thereby saves you hours of tedious typing. Also now that you own SuperKey no one will ever be able to look into your confidential files again (Unless you give them your password!). SuperKey is an extremely powerful and versatile tool.

The Costa GUI 1.7.4

<https://vetusware.com/download/The%20Costa%20GUI%201.7.4/?id=18095>

Costa is a program which runs on top of MS-DOS or compatible operating systems, and replaces the DOS-prompt with a clean, user-friendly interface - a so called GUI (Graphical User Interface). Costa comes with full mouse and keyboard support, and a bunch of useful accessories.

The Costa GUI 1.0.0

Costa is a program which runs on top of MS-DOS or compatible operating systems, and replaces the DOS-prompt with a clean, user-friendly interface - a so called GUI (Graphical User Interface). Costa comes with full mouse and keyboard support, and a bunch of useful accessories.

Word 2.00 for DOS 2.0

<https://vetusware.com/download/Word%202.00%20for%20DOS%202.0/?id=18091>

The Microsoft Word word processor was first introduced for MS-DOS in 1983. Its design made use of a mouse and WYSIWYG graphics. Its crude WYSIWYG/mouse support was a direct response to the Apple Lisa/Mac, and VisiCorp Visi On. Initially it competed against many popular word processors such as WordStar, Multimate, and WordPerfect. Word 2.0 for DOS adds

support for IBM EGA, support for additional printers, enhanced for DOS 2.0, and includes Microsoft Spell 2.0. It was criticized for having slower file access than its competitors. Requires: 256KB RAM, DOS 2.0 or later, two double-sided floppy disk drives or a hard drive. Important: This software contains copy protection. No unprotect is provided or known to exist.
