My mother says take a break for years if I have to, but just keep studying programming. Well I guess I'm stepping down. Thank you Jesus Christ! My mother says we'll be okay for a while.

Anyways, since I haven't really taken a break much in my life I figure it is a good time I started. Of course, I'll still be studying my Borland books on the side. However, I just want to just relax a bit. I'm out of ideas anyways.

All through my life I've mostly made short INTROs mainly showing techniques like how to rotate a cube in space. Instead of doing it the animation way that takes up too much memory it isolates the main points of a cube; Thereby increasing it's speed and efficiency.

Thank you mom and dad for sending me through school. Even today when I'm out of ideas I still thank my mom for encouraging me to keep at it. After all it is a tough market when you compete against 512-bits instead of DOS's 16-bit.

Obviously love goes to my two sisters for being a good sport. They were holding on to a string all these years.

Thanks to all my friends and fans who's been behind me even if the letters never got to me.

Well, I'm back. This time with the introduction of BORLAND. The logo is especially designed for this occasion. It took me a few hours or such to make this. It is alot more complex than it looks. However just know there's more to come. This is just the beginning!

Jesus!  
Chua Me O!

Once again here is a production from my family Huong Thi Vu and Nguyen Binh Thuy, my mom and dad respectively. Here is a full color INTRO showing David Brackeen's 256-color VGA really works well. I did use Microsoft Paint in Windows XP to convert the color photograph into 256 color bitmap format. Borland Turbo C 2.01 is used to make this possible. My soulmate from Vietnam gave me the hat. My mom gave me the earphones, glasses, and shirt. My Doctor uncle from San Antonio gave me the laptop.

Jesus!  
Chua Me O!

Honours to my real mom, Huong Thi Vu. Honours to my real dad, Nguyen Binh Thuy. Love to my real sister, Nguyen Khoa Thi. Love to my real sister, Nguyen Khoa Thuyen. May we always be together for eternity my soulmate from Vietnam, Ho Thi Nga.

Content: Modification of the scroller routine increases speed to a reasonable level.

Originally the old scroller routine was maybe unbareably slow.

Thank you Jesus Christ.

Well, it's not much of a change. However a subtle shift has me feeling some of the readings were still too slow. So I decided to just advance it by half a page. A whole page is neater however sometimes the lines get cut and the letters end up split. In the future I \*might\* add a message detector in it and have it split the page accordingly?

Content: Just another circular routine that reveals a picture.

It has been awhile since I've used the circular routine. However that is my strong points so I'll just use it until 100 years old! I'm surprise it is so fast considering it is Borland Turbo C 2.01. I thought C in general was slower. I guess the compiling process is more efficient than I thought.

Thank you Jesus Christ.

Here is another miracle. I owe OfficeDepot an advertisement for giving me a good discount when price matching. It should also work for other Windows up to 32-bit XP.

Well I hope to live "100-1s". However out of that I don't know if I could always come through for you people? I mean with the weather and all the internet might be down. The server could be overloaded. I could get into an accident. Who knows? There's so much that could get in the way of me producing something new every single day without rest like my parents would want!!!

Anyways, for another day I've managed to make something of interest to myself at least. I've always liked the fade in and fade out intro. So I like to make this one with my favourite teddy bear. I hope you all like it. Besides, I get a kick-back when i visit OfficeDepot; Well at least when they have sales that they could price match. haha

God, Jesus Christ, is number one.

Honours to my real mom Huong Thi Thuyen Vu

Honours to my real dad Nguyen Binh Thuy

Love to my real sister Nguyen Khoa Thi

Love to my real sister Nguyen Khoa Thuyen

Content: Thank you Jesus Christ.

Well I've been working on this routine for quite a while.

It produces a path between two points.

It is a complex routine for me because you have to make a straight path at an angle.

It always travels from point A to point B

This pattern reminds me of one of those fan-like spinners that you blow and it spins on a stick.
